

MASTERING HIGH-SALT SAMPLE

Smarter workflows for High TDS Samples analysis extended on ICP-OES

High-salt samples remain among the most demanding matrices in elemental analysis. In this **#TheElementalCircle** webinar, we revisit this important topic and move beyond the fundamentals to uncover advanced workflows that can transform analytical performance even for ICP-OES users.

Join the discussion as we explore optimized method setups, critical instrument parameters, and innovative sample introduction strategies designed to improve reliability and minimize downtime. Featuring practical insights on flow injection and automated dilution systems, the session will be enriched by application examples from industrial and natural brines, plating bath control, geochemical analysis, and AdBlue testing, delivering actionable ideas you can apply directly in your laboratory.

Key topics:

- Recognize the challenges and risks of running samples with high content of dissolved solid (TDS)
- Identify the optimal sample introduction system for your analysis
- Understand how ICP technologies address issues associated with high TDS matrices
- Review practical applications

Speakers:

Dr. Helmut Ernstberger,

Principal Application Scientist Inorganic Analysis, PerkinElmer

Tihana Goričnik,

Laboratory Expert, Central Testing Laboratory, INA d.d., Croatia
